

# REDSPY<sup>365</sup> CASE STUDY:

## Identifying a Misconfiguration in Seconds

### CLIENT

A major university.

### SITUATION

Prior to a major holiday, a client made a change to their firewall that exposed a large number of vulnerable systems.

### ACTIONS

RedSpy<sup>365</sup> quickly noted these new critical concerns, and automatically generated targeted, preconfigured alerts.

### RESULTS

The analyst and the client became immediately aware of the situation as well as the specific remediation suggestions, and were able to quickly resolve the issue.

### METRICS

Mean Dwell Time became almost instantaneous, significantly improving organizational resilience.
