

REDSpy³⁶⁵ CASE STUDY:

Improving a Client's Detection Systems

CLIENT

A large insurance agency.

SITUATION

A client was confident their detection systems would see any RedSpy³⁶⁵ actions.

ACTIONS

Two phishing campaigns were conducted. After the first (unencrypted) campaign, the client's systems noted that RedSpy³⁶⁵ was able to obtain a session, which it quickly blocked. The RedSpy³⁶⁵ platform learned and adapted. The second (encrypted) campaign went undetected.

RESULTS

The client compared RedSpy³⁶⁵'s events log to their SIEM log to note discrepancies, then gathered critical remediation insights. Upon re-running the second phishing campaign, the client's detection system noted and alerted to the phishing activity.

METRICS

The client's detection systems were now smarter and more capable of alerting to intrusion—maximizing the ROI of defensive investments already made.
